Professional Summary

Versatile Software Developer & Network Automation Engineer with experience in backend development, AI-driven applications, and network automation scripting. Skilled in building intelligent assistants, chatbots, and automation tools using Python, APIs, and NLP. Currently working at Wipro as a Network Automation Engineer with prior experience as a Backend Developer at LBM Infotech. Passionate about delivering efficient, scalable solutions and exploring cutting-edge technologies like AI, automation, and cloud computing.

Skills

- **Programming & AI:** Python, PHP, C, C++, Natural Language Processing (NLP), OpenAI API
- **Frameworks & Libraries:** Flask, Django, Bootstrap, SpeechRecognition, NLTK, OpenCV
- **Web Development:** HTML, CSS, JavaScript, SQL
- **Databases:** MySQL, MongoDB, DBMS
- **Automation & Tools:** Network Automation, API Integration, Linux, Git, Microsoft Office, Cloud basics
- **Other Skills:** Problem Solving, Leadership, Team Collaboration, Communication

Professional Experience

Wipro Ltd — Network Automation Engineer *(March 2023 - Present)*

- Developing automation scripts and solutions to streamline network operations.
- Collaborating with cross-functional teams to ensure smooth deployment.
- Leveraging Python & automation tools to reduce manual tasks.

LBM Infotech, Nashik — PHP Backend Developer (Intern) *(3 months)*

- Built and optimized backend logic using PHP for dynamic web applications.
- Worked with MySQL database for backend integration.

Mahakisan Agro Producer Co. Ltd — Data Entry & Client Communication *(5 months)*

- Handled client communications and maintained data in Excel.
- Ensured data accuracy and streamlined reporting processes.

Projects

• CortexAI Chat Assistant –

I built CortexAI, a Python-based intelligent assistant that runs seamlessly in the browser. ChatGPT-like Python web assistant built using Flask and OpenAI's API. It runs in the browser and responds to user queries through a clean web interface — combining AI chat, real-time data (weather/news).

- **CortexAI Voice Assistant** – A Python-based intelligent assistant that runs on system commands using speech recognition.
 - Built using OpenAI API, Weather API, and News API.
 - Provides real-time data such as weather updates and news.
 - Answers any question intelligently using the OpenAI API.
 - Executes offline system commands (e.g., opening applications, file operations).
 - Designed to run locally on computer without hosting.
- **Daily Report System** –
A Node.js-based web application designed to streamline daily and monthly reporting for professionals. The app allows users to input daily data including DA (Daily Allowance), TA (Travel Allowance), and Kilometres (Km), and then automatically calculates the monthly allowance totals based on the inputs and convert it into pdf.
- **CortexAI VidSnap** –
A CortexAI VidSnap smart web-based tool that allows users to automatically generate Instagram Reels by uploading images and providing a custom message. The app uses Text-to-Speech (TTS) to create engaging voiceovers from the input text, stitching them together with the uploaded visuals — perfect for influencers, marketers, and content creators Education

Education

B.Sc. Computer Science — KTHM College, Nashik, Pune University (2022)

- CGPA: **7.10**

HSC — KKW College, Pimpalgaon, Pune University (2019)

- Percentage: **52.61%**

SSC — Janta Vidhyalay, Pimpalgaon (2017)

- Percentage: **88.80%**
